Tasks to solve in this exercise

1. Open the attached Power BI .pbix file
2. Connect the 3 csv source files

List of Orders

3. Use first Row as Headers
4. Try to change the data type of the column "Order Date" to Date – see what the problem is and remove this applied step again.
5. Create a column from examples to format the Order Date column in the structure "YYYY-MM-DD" – for example 2018-04-01.
6. Now change the data type of that new column again to Date.
7. Remove the Order Date column and then rename your Custom column to "Order Date".
8. Create another column from Examples to extract the weekday from your newly created "Order Date" column.

Order Details

9. Use first Row as Headers
10. Change the data type of the columns accordingly

Sales Target

11. Use First Rows as Headers
12. Change the data type of the "Target" column accordingly
